

Transport Aggregator

TicketMe

Transport Aggregator

What is it?

- ▶ IT solution from Vipservic which allows you to provide the opportunities for implementation of content both for agency business and suppliers.

Its own kind of GDS!

- ▶ The difference from GDS is in commercial terms which compare favorably in favor of cooperation with TicketMe.

You can quickly connect directly to TicketMe via API reducing the stages and costs of accessing resources.

Why is it interesting?

► For a supplier:

Absence of necessity to place resource and the distribution of it at once through all the channels of the Vipservice holding network (Portbilet, Biletix and others).

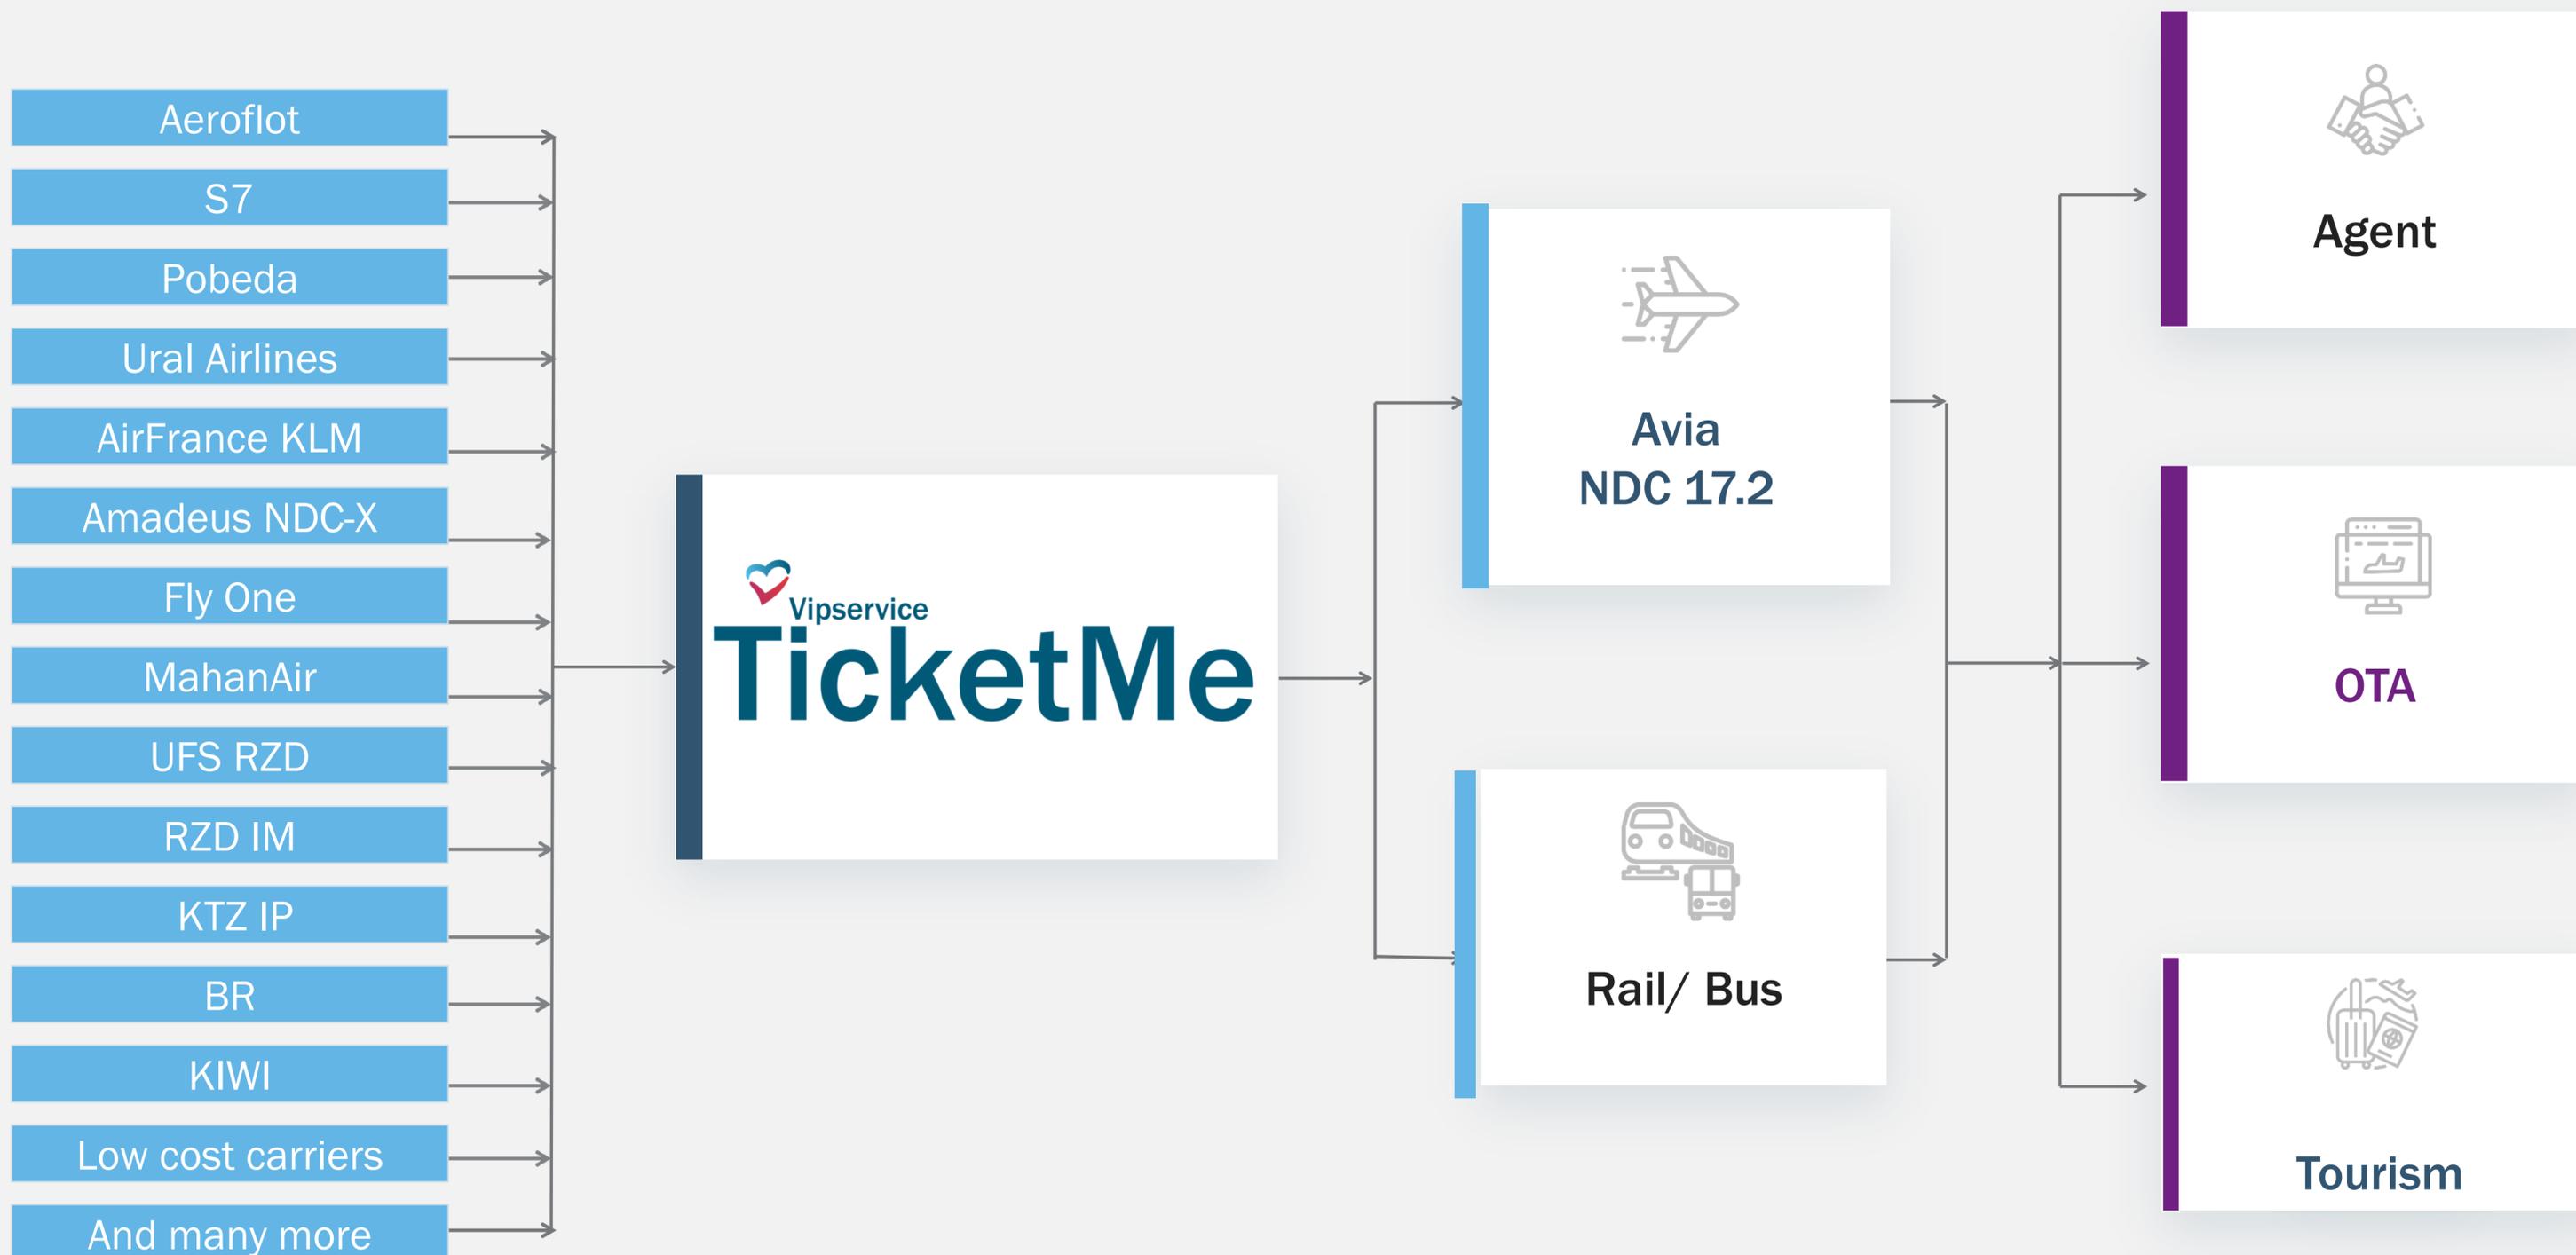

► For an agent:

Ability to access the limited carrier offers in NDC as there are differences between the resource in GDS and one in NDC as well as exclusive content of market players.

It neither limits nor excludes the possible use of current connections to GDS.
